

SUMMARY

Analytically minded Engineering student with a strong foundation in Python, SQL, and Power BI, and hands-on experience building automation and AI-driven tools that turn raw data into actionable insight. Comfortable working under tight deadlines across cross-functional teams, with a track record of reducing manual workflow time and producing clear documentation for non-technical stakeholders. Interested in applying data analytics and AI automation to real-world financial and business operations, with growing focus on core computer-science fundamentals and problem solving.

EDUCATION

SVKM'S NMIMS MPSTME, Shirpur <i>B.Tech, Artificial Intelligence and Machine Learning</i>	(CGPA: 3.12/4)	Jul 2023 - Present
Central Academy Sr. Sec. School <i>Class 12th</i>	Percentage: 66.4%	Apr 2022 - Apr 2023
Evergreen Public School <i>Class 10th</i>	Percentage: 85.2%	Apr 2020 - Apr 2021

MAJOR PROJECTS

PM2.5 Forecasting (PIML) [Link](#) **Feb 2026 - Apr 2026**

- Engineered a **Physics Based SpatioTemporal ConvLSTM Model** for forecasting PM2.5 concentration fields over India with an accuracy of **89.25%**.
- Applied Physics informed **WindWarp module** to simulate pollutant transport using differentiable grid sampling over **16 hours**.

Offline MultiModal RAG [Link](#) **Aug 2025 – Oct 2025**

- Build a fully offline **RAG System** performing semantic search across text, images and audio by eliminating cloud API dependencies for privacy focused deployment.
- Integrated **FAISS vector retrieval**, **Whisper transcription** and **CLIP-based image embeddings** for cross-modal querying.
- Tested over **2000 documents and 500 audio clips**, with an accuracy of **73.87%**

FloatChat (Natural Language Query System) [Link](#) **Aug 2025 – Oct 2025**

- Developed an intelligent NL query interface for Argo oceanographic datasets, enabling non-technical researchers to explore complex climate data without manual scripting.
- Reduced manual report generation time by **4×**, significantly improving researcher workflow efficiency.
- Visualize float trajectories and profile locations with temperature color-coding with detailed T/S (temperature-salinity) diagrams, BGC parameters, and depth profiles.

GPT-2 From Scratch [Link](#)

- Implemented the GPT-2 decoder-only transformer architecture from scratch, including multi-head self-attention, positional embeddings, and the training loop.
- Self-directed deep dive into transformer internals to strengthen low-level understanding of LLM architecture beyond using pre-built libraries.

SKILLS

- Tools and Visualization:** Power BI, Git, Tableau
- Programming and Databases:** Python, C++, SQL, PostgreSQL
- Machine Learning:** PyTorch, Tensorflow, Scikit-Learn, AutoML
- Data Analysis:** Pandas, NumPy, Scipy, NetCDF, XArray
- NLP / LLM:** LangChain, OpenAI API, Claude API, RAG pipelines, Agentic AI, MCP
- OS:** Working familiarity with Unix/Linux command-line environments.
- Soft Skills:** Leadership, Teamwork, Communication, Time Management

CERTIFICATIONS

- Machine Learning with Python Programming: NPTEL
- Deep Learning – IIT Ropar: NPTEL
- Data Analytics – Google

ACHIEVEMENTS & EXTRA CURRICULAR

- 1st Position at ANRF AISEHack 2026, Theme 2 Pollution Forecasting** **Apr 2026**
- 2nd Position at Yugantar 2025 (SIH Internal Round)** **Oct 2025**
- Member & Volunteer, ACM Student Chapter — NMIMS MPSTME Shirpur** **Oct 2025 - Present**
Present Volunteered at Initial Commit: AI Edition, AI/ML workshop, assisting attendees with technical doubts during session.
